Pădure urbană:

Suprafața de teren compactă, de minim 100 metri pătrați, situată în intravilanul unei localități urbane (oraș, municipiu) sau în zona periurbană, cu o lățime de cel puțin 2 metri, pe care au fost plantate specii forestiere arborescente, cu o densitate medie de minim 3 puieti/mp.

Solicitanți și parteneri eligibili:

- UAT-uri (înafara UAT-urilor încadrate la nivel de comune);
- Subdiviziunile administrativ-teritoriale ale municipiului București;
- Instituțiile de învățământ publice;
- Parteneriate între tipurile de solicitanți menționați anterior.

Activități sprijinite în cadrul investiției:

Pădurile urbane se vor realiza folosind o vastă diversitate de arbori și arbuști din specii native și vor avea densități mari, astfel încât să se constituie în "plămâni verzi", care vor aduce beneficii multiple, precum purificarea aerului, reducerea zgomotului, stocarea carbonului, conservarea peisajului, reducerea temperaturii aerului, reducerea anxietății și implicit îmbunătățirea sănătății publice.

Se vor utiliza numai speciile și ecotipurile care sunt reziliante la viitoarele impacturi preconizate ale schimbărilor climatice și acestea nu vor avea efecte adverse asupra biodiversității. Utilizarea speciilor alogene va fi permisă numai în cazul în care se demonstrează că utilizarea acestora duce la condiții ecosistemice favorabile și adecvate (cum ar fi clima, solul, zonele de vegetație, rezistența la foc) și că speciile indigene prezente nu mai sunt adaptate la viitoarele condiții climatice și pedohidrologice modelate.
